Project Design Phase
Problem – Solution Fit Template

Date	29 September 2026
Team ID	SWTID-2026-3564
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Problem – Solution Fit Canvas: Auto Ticket Classification using Flow Designer

1. Customer Segment(s)	❑ IT service desk agents and L1/L2 fulfillers who triage incoming tickets ❑ Employees / end users who raise incidents through the portal, email or chat ❑ IT service managers and ServiceNow admins responsible for SLAs
2. Jobs-to-be-Done / Problems	❑ Classify every new ticket correctly (category, subcategory, priority) ❑ Route the ticket to the right assignment group at once ❑ Cut manual triage effort and avoid misrouted or bouncing tickets ❑ Resolve tickets within SLA and reduce mean time to resolve

3. Triggers	❑ A sudden rise in ticket volume or a growing backlog in the queue ❑ SLA breaches caused by tickets sitting in the wrong group ❑ Management pressure to improve resolution time and productivity ❑ A new incident record being created in the system
4. Emotions: Before / After	❑ Before: overwhelmed, frustrated and anxious about SLA breaches ❑ After: relieved, confident and in control of the queue ❑ Users feel heard because tickets reach the right team fast
5. Available Solutions	❑ Manual triage by the service desk: flexible but slow and inconsistent ❑ Business rules / assignment rules: fast but need scripting and are hard to maintain ❑ Email or keyword filters: simple but inaccurate ❑ Predictive ML models: powerful but need extra licence and training data
6. Customer Constraints	❑ Limited budget and licensing for advanced AI add-ons ❑ Few admins with scripting skills ❑ Free-text, inconsistent ticket descriptions ❑ Need for governance, testing and easy rollback of changes
7. Behaviour	❑ Agents open each ticket, read it and set category and priority by hand ❑ Reassign tickets between groups and ask users for more details ❑ Track misrouted tickets in spreadsheets ❑ Ask admins to write or change rules whenever routing changes
8.1 Channels of Behaviour: Online	❑ Users raise tickets on the Service Portal, by email or by chat ❑ Agents work in ServiceNow lists, workspace and dashboards ❑ Search the knowledge base and receive notifications on assignment

8.2 Channels of Behaviour: Offline	❑ Calling or walking up to the service desk ❑ Verbal escalation to team leads ❑ Team stand-ups to discuss queue and priority tickets
9. Problem Root Cause	❑ Ticket volume keeps growing while the support team stays small ❑ Users pick wrong categories and write unstructured descriptions ❑ No consistent, automated classification rules exist ❑ Manual triage is subjective, time-consuming and error-prone
10. Your Solution	❑ A ServiceNow Flow Designer flow triggered when an incident is created or updated ❑ Low-code logic (conditions, If/Else and keyword lookups) automatically sets category, subcategory, priority and assignment group ❑ Adds work notes and notifies the assigned group; unmatched tickets fall back to a manual triage queue ❑ Built without heavy scripting, tested with the Flow Designer test tool, and easy to update as routing rules change ❑ Result: faster routing, fewer misrouted tickets and better SLA compliance
